PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with hands-on experience running AWS infrastructure, CI/CD pipelines and containerized applications for live client sites. Automates releases with GitHub Actions and Jenkins, manages infrastructure with Terraform, and deploys Docker images to Amazon ECS on AWS Fargate. Seven cloud and DevOps projects published on GitHub. Oracle Cloud Infrastructure Foundations Associate certified. Preparing for AWS Certified Solutions Architect - Associate.

SKILLS

Cloud (AWS): EC2, S3, VPC, IAM, Route 53, CloudFront, ALB, Auto Scaling, Lambda, API Gateway, ECS, Fargate, ECR, CloudWatch, CloudTrail, DynamoDB; Oracle Cloud Infrastructure

CI/CD: GitHub Actions, Jenkins, pipeline-as-code, automated test gates, rolling deployments, rollback strategy

Infrastructure as Code: Terraform (reusable modules, S3 remote state, DynamoDB locking)

Containers: Docker, multi-stage builds, Docker Compose, ECR, ECS, Fargate; Kubernetes (basics)

Linux and Networking: RHEL, systemd, SSH, Bash, Nginx reverse proxy, DNS, SSL/TLS, load balancing, subnetting, log analysis

Security: IAM roles and policies (least privilege), RBAC, MFA, security groups, private subnets, CloudTrail audit logging

Tools and Languages: Git, GitHub, Python, JavaScript (ES6+), React.js, HTML5, CSS3, REST APIs, Postman, JIRA

WORK HISTORY

React and Cloud Engineer
Brandskey Creative Studio, Udaipur, India | June 2026 - Present

- Cut deployment time from 20 minutes to under 3 by replacing manual release steps with GitHub Actions workflows that run on every push to main.
- Host and maintain all live client sites on AWS (S3, CloudFront, Route 53) with HTTPS enforced and zero customer-reported outages to date.
- Improved page load time by 40% across client sites through CloudFront caching, asset compression and lazy loading, raising Core Web Vitals scores.
- Enforce feature-branch workflow and pull request review across 8 repositories so every change to main is reviewed before merge.
- Developed 5 responsive React.js applications with reusable components, Hooks and React Router, tested in 4 major browsers before release.

Quality Assurance Intern
Websenor, Udaipur, India | May 2026 - June 2026

- Logged 50+ defects with reproduction steps and severity ratings across manual, exploratory and regression testing cycles.
- Verified bug fixes on staging and production builds across 3 deployment cycles to reduce regressions reaching end users.

EDUCATION

Bachelor of Computer Applications (BCA)
Sir Padampat Singhania University, Udaipur, India | August 2023 - June 2026 | CGPA: 7.0/10
Coursework: Cloud Computing, Operating Systems, Computer Networks, Database Management Systems, Web Technologies, Data Structures, Software Engineering.

CERTIFICATIONS AND TRAINING

- Oracle Cloud Infrastructure Foundations Associate, Oracle, 2025
- AWS Certified Solutions Architect - Associate, in preparation, target 2026
- Getting Started with Linux Fundamentals (RH104), Red Hat, 2024
- DevOps on AWS: Code, Build and Test, and AWS Cloud Technical Essentials, AWS / Coursera, 2025

SELECTED PROJECTS

FargateFlow: Serverless Container Delivery Pipeline | *Fargate, ECS, ECR, IAM, VPC, Docker, GitHub Actions*

- Built a pipeline that builds a container on every commit, pushes the image to ECR and deploys it to Fargate with no manual steps.
- Locked the workload down with least-privilege IAM task and execution roles, private VPC subnets and tight security groups, so nothing is exposed publicly.
- Wrote ECS task and service definitions that replace tasks gradually, so deployments do not drop live traffic.

Terraform Reusable AWS Modules | *Terraform, EC2, VPC, S3, IAM, DynamoDB*

- Wrote 4 reusable modules for EC2, VPC subnets, S3 buckets and IAM roles, replacing manually created infrastructure with version-controlled code.
- Set up S3 remote state with DynamoDB locking so several people can run changes without corrupting state.
- Made the whole stack rebuildable from a single terraform apply, with full recovery in under 5 minutes.

DockerDeploy: Multi-Stage CI/CD Pipeline | *Docker, GitHub Actions, Nginx, Node.js, React*

- Built a 5-stage pipeline (install, lint, test, build, deploy) that runs on every push and removes manual releases.
- Cut the production image size by over 60% with a two-stage Dockerfile that serves static files from Nginx and leaves the Node.js build tools behind.
- Fixed inconsistent pipeline failures caused by Node.js version differences across 3 runners by pinning the version in the workflow.

AWS IAM Security Automation | *IAM, CloudTrail, Bash, Python, RBAC*

- Turned a 6-step manual process into one repeatable command by scripting IAM account creation, group assignment and MFA enforcement in Bash and Python.
- Applied the same least-privilege policies to every account and turned on CloudTrail logging to keep a record of permission changes.

EC2 Auto Scaling Web Application | *EC2, ALB, Auto Scaling, VPC, CloudWatch*

- Deployed an app across 2 availability zones behind an Application Load Balancer, so a single failed instance does not take the site down.
- Set CloudWatch CPU alarms to drive Auto Scaling, and tested failover by terminating instances under load and confirming they were replaced.

Jenkins and Nginx CI/CD Server | *Jenkins, Nginx, RHEL, systemd, SSL/TLS*

- Set up a Jenkins server on RHEL as a systemd service behind an Nginx reverse proxy with HTTPS, so it restarts on its own after a reboot.
- Resolved 5 service incidents by reading systemd journals and Nginx access logs and fixing the service and proxy configs.

Serverless Text-to-Speech API | *Lambda, API Gateway, Amazon Polly, IAM*

- Built a serverless text-to-speech API that responds in under 300 ms. The Lambda role only has the Polly and logging permissions it needs.

ADDITIONAL INFORMATION

- Languages: English (professional working proficiency), Hindi (native)
- Notice period: 1 month
- Portfolio: 7 cloud and DevOps projects with source and documentation at github.com/ayanakhtar04
